## IN THE CLAIMS:

 (Original) A printed wiring board (PWB) for attaching electrical components thereto, comprising:

a stack of insulating layers;

conductive layers located between said insulating layers and wherein at least a portion of said conductive layers terminates at a continuous edge of a PWB; and

an edge plate interconnect located on said continuous edge of said PWB that contacts at least a portion of said conductive layers at said continuous edge.

- 2. (Original) The PWB as recited in Claim 1 wherein said edge plate interconnect is a first edge plate interconnect that contacts a first set of said conductive layers at said continuous edge of said PWB, and said PWB further includes a second edge plate interconnect located on said edge that contacts a second set of said conductive layers at said continuous edge, said first and second edge plate interconnects forming separate interconnects.
- (Original) The PWB as recited in Claim 2 wherein said continuous edge is an
  external edge located at an outer perimeter of said PWB and said first and second edge plate
  interconnects form stacked interconnects.
- (Original) The PWB as recited in Claim 1 wherein said continuous edge is an
  edge located on an edge of an opening formed within an interior of said PWB.
- (Original) The PWB as recited in Claim 4 wherein said opening is a core-on-board opening for a magnetic core having windings associated therewith.

6. (Original) The PWB as recited in Claim 5 wherein said edge plate interconnect is a first edge plate interconnect that contacts a first conductive winding of said magnetic core within said PWB, and said PWB further includes a second edge plate interconnect located on said edge that contacts a second winding of said magnetic core within said PWB, said first and second edge plate interconnects forming separate interconnects for said first and second conductive windings, respectively.
